USAMO 1994 [1]

Siano $k_1 < k_2 < k_3 < \dots$ interi positivi non consecutivi, e sia $s_m = k_1 + k_2 + \dots + k_m$ per $m = 1, 2, \dots, m$. Provate che per ogni intero positivo n , l'intervallo $[s_n; s_{n+1})$ contiene almeno un quadrato perfetto.

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Un Regolo Calcolatore non si spegne improvvisamente quando fa troppo caldo.

Il Meraviglioso Mondo della Statistica

1. Il 10% dei ladri d'auto sono mancini.
 2. Tutti gli orsi polari sono mancini
- > Se vi hanno rubato la macchina, ci sono il 10% di probabilità che ve l'abbia soffiata un orso polare.

Someone told me that each equation I included in the book would halve its sales.

Stephen William HAWKING

Physics is becoming too difficult for the physicists.

David HILBERT

The proof of the Hilbert Basis Theorem is not mathematics; it is theology.

Camille JORDAN

Say what you know, do what you must, come what may.

Sofia Vasilievna KOVALEVSKAJA

When we ask advice, we are usually looking for an accomplice.

Joseph-Louis LAGRANGE

It gives me the same pleasure when someone else proves a good theorem as when I do it myself.

Lev Davidovich LANDAU

I have no certainties, at most probabilities.

Renato CACCIOPPOLI

"When I use a word," Humpty Dumpty said, in a rather scornful tone, "it means just what I choose it to mean - neither more nor less."

"The question is," said Alice, "whether you can make words mean so many different things."

"The question is," said Humpty Dumpty, "which is to be master - that's all."

Charles DODGSON

USAMO 1994 [2]

I lati di un 99-agono sono inizialmente colorati in modo tale che i lati consecutivi siano rosso, blu, rosso, blu, ..., rosso, blu, giallo. Generiamo una sequenza di modifiche nella colorazione cambiando colore ad un lato per volta e scegliendo tra i tre colori dati, sotto la restrizione che due lati adiacenti non siano mai dello stesso colore. È possibile generare una sequenza tale che la successione dei colori sia rosso, blu, rosso, blu, rosso, blu, ..., rosso, giallo, blu?

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Cento persone che stiano usando Regole Calcolatori, Carta e Matita non si mettono a strillare per un errore in virgola mobile.

If you have a cross-CAP on your sphere,
And you give it a circle-shaped tear,
Then just shake it about
And untangle it out
And a Moebius strip will appear!

Measure what is measurable, and make measurable what is not so.

Galileo GALILEI

Whenever you can, count.

Francis GALTON

Mathematics is a language

Josiah Willard GIBBS

Mathematics is an interesting intellectual sport but it should not be allowed to stand in the way of obtaining sensible information about physical processes.

Richard Wesley HAMMING

In most sciences one generation tears down what another has built, and what one has established, another undoes. In mathematics alone each generation adds a new storey to the old structure.

Hermann HANKEL

I am interested in mathematics only as a creative art.

Godfried Harold HARDY

USAMO 1994 [3]

Un esagono convesso $ABCDEF$ è iscritto in una circonferenza in modo tale che $AB=CD=EF$ e le diagonali AD , BE e CF sono concorrenti. Sia P l'intersezione di AD con CE . Provatte che $CP/PE=(AC/CE)^2$.

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Un Regolo Calcolatore non comincia a fumare quando l'alimentazione ha il singhiozzo. E non si preoccupa se cominciate a fumare o avete il singhiozzo.

When I set k equal to 0,
I can be a mathematical hero:
If I should decide
By k to divide,
Then it's clear that $1 = 0$.

We [he and Halmos] share a philosophy about linear algebra: we think basis-free, we write basis-free, but when the chips are down we close the office door and compute with matrices like fury.

Irving KAPLANSKY

Nature laughs at the difficulties of integration.

Pierre-Simon de LAPLACE

The mathematician's best work is art, a high perfect art, as daring as the most secret dreams of imagination, clear and limpid. Mathematical genius and artistic genius touch one another.

Magnus Gosta MITTAG LEFFLER

A mathematician is a person who can find analogies between theorems; a better mathematician is one who can see analogies between proofs and the best mathematician can notice analogies between theories. One can imagine that the ultimate mathematician is one who can see analogies between analogies.

Stefan BANACH

The essence of mathematics lies in its freedom.

Georg CANTOR

This has been done elegantly by Minkowski; but chalk is cheaper than grey matter, and we will do it as it comes.

Albert EINSTEIN

USAMO 1994 [4]

Sia a_1, a_2, a_3, \dots una sequenza di numeri reali positivi tali che $\sum_{j=1}^n a_j \geq \sqrt{n}$ per qualsiasi $n \geq 1$. Provate che, per tutti gli $n \geq 1$, $\sum_{j=1}^n a_j^2 > \frac{1}{4} \left(1 + \frac{1}{2} + \dots + \frac{1}{n} \right)$

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Potete versare tranquillamente caffè su un Regolo Calcolatore; potete anche usarlo per girare il caffè.

Il Meraviglioso Mondo della Statistica

- Il 39% dei disoccupati porta gli occhiali
 - l'80% degli occupati porta gli occhiali
- Il lavoro rovina la vista.

The total number of Dirichlet's publications is not large: jewels are not weighed on a grocery scale.

Carl Frederick GAUSS
In describing the honourable mission I charged him with, M. Pernety informed me that he made my name known to you. This leads me to confess that I am not as completely unknown to you as you might believe, but that fearing the ridicule attached to a female scientist, I have previously taken the name of M. LeBlanc in communicating to you those notes that, no doubt, do not deserve the indulgence with which you have responded.

Sophie GERMAIN
[He] gave a formal demonstration of the inadequacy of formal demonstrations.

Anonymous, about Kurt GODEL
The presentation of mathematics in schools should be psychological and not systematic. The teacher, so to speak, should be a diplomat. He must take account of the psychic processes in the boy in order to grip his interest, and he will succeed only if he presents things in a form intuitively comprehensible. A more abstract presentation is only possible in the upper classes.

Felix KLEIN

USAMO 1995 [1]

Sia p un primo dispari. La sequenza (a_n) , $n \geq 0$ è definita come: $a_0=0$, $a_1=1$, ..., $a_{p-2}=p$ e, per tutti gli $n \geq p-1$, a_n è il più piccolo numero positivo che non forma una successione aritmetica di lunghezza p con nessuno dei termini precedenti. Provate che, per tutti gli n , a_n è il numero ottenuto scrivendo n in base $p-1$ e leggendolo in base p .

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Un Regolo Calcolatore, Carta e Matita lasciano in una borsa abbastanza spazio per un panino e un ricambio di calzini.

Mathematics: of sciences, queen
Has more rules than I've ever seen.
There are no exceptions,
Just number deceptions.
On calculators, I am quite keen.

Euclid for children is barbarous.

Oliver HEAVISIDE

Now one may ask, "What is mathematics doing in a physics lecture?" We have several possible excuses: first, of course, mathematics is an important tool, but that would only excuse us for giving the formula in two minutes. On the other hand, in theoretical physics we discover that all our laws can be written in mathematical form; and that this has a certain simplicity and beauty about it. So, ultimately, in order to understand nature it may be necessary to have a deeper understanding of mathematical relationships. But the real reason is that the subject is enjoyable, and although we humans cut nature up in different ways, and we have different courses in different departments, such compartmentalization is really artificial, and we should take our intellectual pleasures where we find them.

Richard FEYNMAN

USAMO 1995 [3]

Dato un triangolo non isoscele e non rettangolo ABC ; sia O il centro del cerchio circoscritto, e siano A_1 ; B_1 ; e C_1 i punti medi dei lati BC ; CA ; e AB ; rispettivamente. Il punto A_2 è posto sul raggio OA_1 in modo tale che il triangolo OAA_1 sia simile al triangolo OA_2A . I punti B_2 e C_2 sui raggi OB_1 e OC_1 ; sono rispettivamente definiti nello stesso modo. Provate che le linee AA_2 ; BB_2 ; e CC_2 sono concorrenti.

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Il Meraviglioso Mondo della Statistica

- Ogni secondo nel mondo vengono aperte 4000 lattine di birra
 - ogni secondo nel mondo sono concepiti 10 bambini
- Ogni volta che aprite una birra, avete una probabilità su 400 di restare incinta.

It is rare to find learned men who are clean, do not stink and have a sense of humour.

(Montesquieu about) Gottfried von LEIBNIZ
The imaginary number is a fine and wonderful resource of the human spirit, almost an amphibian between being and not being.

Gottfried von LEIBNIZ
Probability is a mathematical discipline whose aims are akin to those, for example, of geometry of analytical mechanics. In each field we must carefully distinguish three aspects of the theory:
(a) the formal logical content,
(b) the intuitive background,
(c) the applications.

The character, and the charm, of the whole structure cannot be appreciated without considering all three aspects in their proper relation.

William FELLER

USAMO 1995 [4]

Supponiamo q_0, q_1, q_2, \dots sia una sequenza infinita di interi soddisfacente le seguenti condizioni:

1. $m-n$ divide $q_m - q_n$ per $m > n \geq 0$
2. Esiste un polinomio P tale che $|q_n| < P(n)$ per tutti gli n .

Provate che esiste un polinomio Q tale che $q_n = Q(n)$ per tutti gli n .

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Un Regolo Calcolatore non richiede manutenzione hardware periodica; Carta e Matita supportano sia il modo grafico che il modo testo, e potete effettuare l'upgrade da monocromatico a colore quando volete.

Q: Quale gruppo Abeliano sull'addizione è chiuso, associativo, distributivo e porta sfortuna?

A: L'Anello dei Nibelunghi

Who would not rather have the fame of Archimedes than that of his conqueror Marcellus?

Sir William Rowan HAMILTON
Whoever in the pursuit of science, seeks after immediate practical utility may rest assured that he seeks in vain.

Hermann Ludwig Ferdinand von HELMOLTZ
Steinhaus, with his predilection for metaphors, used to quote a Polish proverb, *'Fortunny kolem sie toczą'* [Luck runs in circles], to explain why π , so intimately connected with circles, keeps cropping up in probability theory and statistics, the two disciplines which deal with randomness and luck.

Mark KAC
It appears to me that if one wishes to make progress in mathematics, one should study the masters and not the pupils.

Niels Henrich ABEL
In science one tries to tell people, in such a way as to be understood by everyone, something that no one ever knew before. But in poetry, it's the exact opposite.

Paul Adrien Maurice DIRAC

USAMO 1995 [5]

Supponete che in un certo gruppo ogni coppia di persone possa essere classificata come **amichevole** o **ostile**. Diremo che ogni membro di una coppia amichevole è **amico** dell'altro membro, mentre ogni membro di una coppia ostile è **nemico** dell'altro. Supponiamo inoltre che il gruppo sia composto da n persone ed esistano q coppie amichevoli, e che per ogni insieme di tre persone almeno una coppia sia ostile. Mostrate che esiste almeno un membro della società i cui nemici comprendono

$$q \left(1 - \frac{4q}{n^2} \right) \text{ o meno coppie amichevoli.}$$

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

I Regoli Calcolatori sono progettati secondo un'architettura standard e aperta; sono immuni da virus, worm e qualunque forma di attacco possibile ad adolescenti dotati di connessione telefonica.

Q: Che cosa ha un lato solo e vive nel mare?

A: Mobius Dick.

From the intrinsic evidence of his creation, the Great Architect of the Universe begins to appear as a pure mathematician.

James Hopwood JEANS

It is clear that Economics, if it is to be a science at all, must be a mathematical science.

William JEVONS

If it's just turning the crank it's algebra, but if it's got an idea in it, it's topology.

Solomon LEFSCHETZ

How then shall mathematical concepts be judged? They shall not be judged. Mathematics is the supreme arbiter. From its decisions there is no appeal. We cannot change the rules of the game, we cannot ascertain whether the game is fair. We can only study the player at his game; not, however, with the detached attitude of a bystander, for we are watching our own minds at play.

David van DANTZIG

IMO 1961 [2]

Siano a , b , c i lati di un triangolo e sia A la sua area. Provate che

$$a^2 + b^2 + c^2 \geq 4\sqrt{3}A$$

In che casi si ha l'uguaglianza?

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Potete impugnare un Regolo Calcolatore a braccio teso e darlo in testa al noioso davanti.

Q: Cos'è un orso polare?

A: Un orso rettangolare dopo una trasformazione di coordinate.

Unfortunately what is little recognized is that the most worthwhile scientific books are those in which the author clearly indicates what he does not know; for an author most hurts his readers by concealing difficulties.

Evariste GALOIS

An expert is a man who has made all the mistakes, which can be made, in a very narrow field.

Niels BOHR

Newton is, of course, the greatest of all Cambridge professors; he also happens to be the greatest disaster that ever befell not merely Cambridge mathematics in particular, but British mathematical science as a whole.

Klaus ROTH

It is true that a mathematician who is not also something of a poet will never be a perfect mathematician.

Karl WEIERSTRASS

IMO 1961 [4]

P si trova all'interno del triangolo ABC . PA interseca BC in D , PB interseca AC in E , e PC interseca AB in F . Provate che almeno uno dei rapporti AP/PD , BP/PE , CP/PF è non maggiore di 2, e almeno uno è non minore di 2.

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Nessuno vi metterà mai in crisi inventando un Regolo Calcolatore più piccolo, veloce o economico del vostro il mese prossimo.

Nella moderna matematica l'algebra è diventata così importante che presto i numeri avranno solo un significato simbolico.

The history of astronomy is a history of receding horizons.

Edwin Powell HUBBLE

The history of mathematics, lacking the guidance of philosophy, [is] blind, while the philosophy of mathematics, turning its back on the most intriguing phenomena in the history of mathematics, is empty.

Imre LAKATOS

Being a language, mathematics may be used not only to inform but also, among other things, to seduce.

Benoit MANDELBROT

Probability is expectation founded upon partial knowledge. A perfect acquaintance with *all* the circumstances affecting the occurrence of an event would change expectation into certainty, and leave neither room nor demand for a theory of probabilities.

George BOOLE

Thus metaphysics and mathematics are, among all the sciences that belong to reason, those in which imagination has the greatest role. I beg pardon of those delicate spirits who are detractors of mathematics for saying this The imagination in a mathematician who creates makes no less difference than in a poet who invents.... Of all the great men of antiquity, Archimedes may be the one who most deserves to be placed beside Homer.

Jean Le Rond D'ALEMBERT

IMO 1961 [6]

Dati tre punti non allineati A, B, C e un piano p non parallelo a ABC e tale che A, B, C siano tutti dalla stessa parte di p e presi tre punti arbitrari A', B', C' in p , siano A'', B'', C'' i tre punti medi di AA', BB', CC' rispettivamente, e sia O il centroide di A', B', C'' . Qual'è il luogo geometrico di O al variare di A, B, C ?

Perché un Regolo Calcolatore, Carta e Matita sono meglio di qualsiasi computer

Altra Carta e altre Matite possono essere integrate nel sistema senza necessità di riconfigurare tutto.

Legge della Gravità selettiva: Un oggetto cade in modo tale da causare il maggior danno possibile.

The shortest path between two truths in the real domain passes through the complex domain.

Jaques Salomon HADAMARD

Abel has left mathematicians enough to keep them busy for 500 years.

Charles HERMITE

Mathematics is the science of what is clear by itself.

Karl Gustav Jacob JACOBI

Priusquam autem ad creationem, hoc est ad finem omnis disputationis, veniamus: tentanda omnia existimo.

Johannes KEPLER

Number theorists are like lotus-eaters - having tasted this food they can never give it up.

Leopold KRONECKER

There is no branch of mathematics, however abstract, which may not some day be applied to phenomena of the real world.

Nikolay Yvanovich LOBACHEVSKY

The Analytical Engine weaves algebraic patterns, just as the Jacquard loom weaves flowers and leaves.

Augusta Ada KING Countess of LOVELACE

The Council of the Royal Society is a collection of men who elect each other to office and then dine together at the expense of this society to praise each other over wine and give each other medals.

Charles BABBAGE
