### 18° USAMO (1989) - 5

$u$  e  $v$  sono due numeri reali per cui e`:

$$\sum_{i=1}^8 u^i + 10 * u^9 =$$

$$= \sum_{i=1}^{10} v^i + 10 * v^{11} = 8$$

Determinare (con dimostrazione) qual'e` il maggiore.

Gli umani si dividono in due categorie: quelli che non conoscono la matematica e quelli che si prendono cura di loro.

A mathematician confided  
That a Moebius strip is one-sided  
You' get quite a laugh  
If you cut it in half,  
For it stay in one piece when divided.

*A mathematician's reputation rests on the number of bad proofs he has given.*

Abram BESICOVICH

*If you are afraid of something, measure it, and you will realize it is a mere triple*

Renato CACCIOPPOLI

*Someone told me that each equation I included in a book would halve the sales.*

Stephen HAWKING

*God not only plays dice. He also sometimes throws the dice were they cannot be seen.*

Stephen HAWKING

*"When I use a word," Humpty Dumpty said, in a rather scornful tone, "it means just what I choose it to mean, neither more or less". "The question is," said Alice, "wether you can make words mean so many different things". "The question is," said Humpty Dumpty, "wich is to be master; that's all".*

Charles DOGSON

*When we ask advice, we are usually looking for an accomplice.*

Joseph-Louis LAGRANGE

*The latest authors, like the most ancient, strove to subordinate the phenomena of nature to the laws of mathematics*

Isaac NEWTON

### 19° USAMO (1990) - 5

Trovate (come funzione di  $n$ ) il numero degli interi positivi la cui rappresentazione in base  $n$  consiste di cifre distinte con la proprieta` (ad esclusione della cifra piu` significativa) che ogni cifra differisce di  $\pm 1$  da qualche cifra alla sua sinistra.

La filosofia e` un gioco con degli obiettivi ma senza regole.

La matematica e` un gioco con delle regole ma senza obiettivi.

Consider the pitiful plight  
Of a runner who wasn't too bright  
But he sprinted so fast,  
That he vanished at last  
By red-shifting himself out of sight

*Common sense is not really so common.*

Antoine ARNAUD

*It would be better for the true physics if there were no mathematicians on hearth.*

Daniel BERNOULLI

*A mathematician can will recognize Cauchy, Gauss, Jacobi, or Helmholtz after reading a few pages, just as musician recognize, from the first few bars, Mozart, Beethoven or Schubert.*

Ludwig BOLTZMANN

*Whenever you can, count.*

Francis GALTON

*One of the principle objects of research in my department of knowledge is to find the point of view from which the subject appears in the greatest simplicity.*

Willard GIBBS

*I am interested in mathematics only as a creative art.*

Godfried HARDY

### 18° USAMO (1990) - 5

E' dato un triangolo acutangolo  $ABC$ . Il cerchio di diametro  $AB$  interseca l'altezza  $CC'$  e la sua estensione nei punti  $M$  e  $N$  e il cerchio di diametro  $AC$  interseca l'altezza  $BB'$  e la sua estensione nei punti  $P$  e  $Q$ . Provare che  $M, N, P$  e  $Q$  sono conciclici.

I simboli algebrici vengono utilizzati quando non si sa di cosa si sta parlando.

A Calculus student upset as could be  
That his antiderivative just didn't agree  
With the answer in the book  
Even after a second look  
Indeed it was off, but by a constant C

*Don't worry about people stealing your ideas. If your ideas are any good, you'll have to ram them down people's throats.*

Howard AIKEN

*A mathematician is a person who can find analogies between theorems; a better mathematician is one who can see analogies between proofs and the best mathematician can notice analogies between theories. One can imagine that the ultimate mathematician is one who can see analogies between analogies.*

Stefan BANACH

*The essence of mathematics lies in its freedom.*

Georg CANTOR

*Perfect numbers like perfect men are very rare.*

Rene` DESCARTES

*It is not enough to have a good mind. The main thing is to use it well.*

Rene` DESCARTES

*I don't believe in mathematics.*

Albert EINSTEIN

*The search for truth is more precious than its possession.*

Albert EINSTEIN

*A mathematician is a machine for turning coffee into theorems.*

Paul ERDÖS

### 20° USAMO (1991) - 3

Mostrare che, per ogni dato intero positivo  $n$ , la sequenza

$$2, 2^2, 2^{2^2}, \dots, a_k = 2^{a_{k-1}} \pmod{n}$$

assume, prima o poi, un valore costante.

Per gli ingegneri le equazioni approssimano il mondo reale.

Per i fisici il mondo reale approssima le equazioni

I matematici non vedono la connessione.

A mathematician named Klein  
Thought the Mobius band was divine  
Said he, "If you glue  
The edges of two  
You get a weird bottle like mine"

*A quantity which is increased or decreased by an infinitely small quantity is neither increased or decreased.*

Johann BERNOULLI

*To isolate mathematics from the practical demands of the sciences is to invite the sterility of a cow shut away from the bulls.*

Lipa BERS

*Where did we get Schrodinger's equation from? It's not possible to derive it from anything you know. It came out of the mind of Schrodinger.*

Richard FEYNMAN

*Nature is not embarrassed by difficulties of analysis.*

Augustin FRESNEL

*This series is divergent therefore we may be able to do something with it.*

Oliver HEAVISIDE

*The whole problem with the world is that fools and fanatics are always so certain of themselves, but wiser people so full of doubts.*

Bertrand RUSSELL

### 20° USAMO (1991) - 4

Siano  $m$  e  $n$  interi positivi, e sia

$$a = \frac{m^{m+1} + n^{n+1}}{m^m + n^n}$$

Provare che e`

$$a^m + a^n \geq m^m + n^n.$$

**Teorema:** Tutti gli interi positivi sono interessanti

**Dimostrazione:** Supponiamo vero il contrario. Allora esiste un minimo intero positivo non interessante. Molto interessante! Una contraddizione. Q.E.D.

A challenge for many long ages  
Had baffled the savants and sages.  
Yet at last came the light:  
Seems old Fermat was right:  
To the margin add 200 pages

*In my opinion, a mathematician, in so far as he is a mathematician, need not preoccupy himself with philosophy... An opinion, moreover, wich has been expressed by many philosophers...*

Henri LEBESGUE

*Try a hard problem. You may not solve it, but you will prove something else.*

John E. LITTLEWOOD

*The numbers may be said to rule the whole world of quantity, and the four rules of arithmetic may be regarded as the complete equipment of the mathematician.*

James Clerk MAXWELL

*The mathematical education of Albert Einstein was not very solid, wich I am in good position to evaluate since he obtained it from me in Zurich some time ago.*

Hermann MINKOWSKY

### 21° USAMO (1992) - 1

Trovare, come funzione di  $n$ , la somma delle cifre di:

$$9 * 99 * 9999 * \dots * (10^{2n} - 1)$$

in cui ogni fattore ha il doppio delle cifre del precedente.

Avete presente quanto e' stupido l'umano medio? Beh, per definizione la meta` degli umani sono ancora piu` stupidi.

Points

Have no part or joints

How then can they combine

To form a line?

*Probability is a mathematical discipline whose aims are akin to those, for example, of geometry of analytical mechanics. In each field we must carefully distinguish three aspects of the theory:*

(a) the formal logical content

(b) the intuitive background

(c) the applications.

*The character, and the charm, of the whole structure cannot be appreciated without considering all three aspects in their proper relation.*

William FELLER

*When working on a problem, I never think about beauty; I think only of how to solve the problem. But when I have finished, if the solution is not beautiful, I know that is wrong.*

Richard BUCKMINSTER FULLER

*The art of discovering the causes of phenomena, or true hypothesis, is like the art of decyphering, in which an ingenious conjecture greatly shortens the road.*

Gottfried LEIBNITZ

*[The infinitesimals] neither have nor can have theory; in practise it is a dangerous instrument in the hand of beginners. Anticipating the judgement of posterity, I would predict that this method will be accused one day, and rightly, of having retarded the progress of the mathematical sciences.*

François SERVOIS

### 21° USAMO (1992) - 4

Le corde  $\overline{AA'}$ ,  $\overline{BB'}$ ,  $\overline{CC'}$  di una sfera si incontrano in un punto  $P$  ma non giacciono sullo stesso piano. La sfera passante per  $A, B, C, P$  e` tangente alla sfera passante per  $A', B', C', P$ . Provare che e`  $\overline{AA'} = \overline{BB'} = \overline{CC'}$

Una statistica ha dimostrato che la causa principale di morte e` nascere.

In Arctic and Tropical Climes,  
The Integers, additions and times,  
Taken (mod p) will yeld,  
A full finite field,  
As p ranges over the primes.

*The unproved postulates with which we start are purely arbitrary. They must be consistent, but they had better lead to something interesting.*

Julian COOLIDGE

*We may as well cut out the group theory. That is a subject that will never be of any use in science.*

James JEANS

*It is clear that Economics, if it is to be a science at all, must be a mathematical science.*

William JEVONS

*If it's just turning the crank is algebra, but if it's got an idea in it, it's topology.*

Solomon LEFSCHETZ

*The pragmatist knows that doubt is an art wich has to be acquired with difficulty.*

Charles PEIRCE

*The early study of Euclid make me a hater of geometry.*

James SYLVESTER

*I believe that proving is not a natural activity for mathematicians.*

Rene` THOM

*Algebra is rich in structure but weak in meaning.*

### 22° USAMO (1993) - 1

Per ogni intero  $n \geq 2$  determinare (con dimostrazione) quale tra i due numeri  $a$  e  $b$  soddisfacenti le espressioni

$$\begin{cases} a^n = a + 1 \\ b^{2n} = b + 3a \end{cases}$$

e' il maggiore.

Un matematico e` quel tizio che se vede entrare 3 persone in una stanza e ne vede uscire 5, sostiene che per avere la stanza vuota ne devono entrare ancora 2.

A graduate student at Trinity  
Computed the square of infinity  
But it gave him the fidgets  
To put down the digits  
So he dropped math and took up divinity

*An expert is a man who has made all the mistakes which can be made in a very narrow field.*

Niels BOHR

*How wonderful that we have met with a paradox. Now we have some hope of making progress.*

Niels BOHR

*As professor in the Polytechnic School in Zürich I found myself for the first time obliged to lecture upon the elements of the differential calculus and felt more keenly than ever before the lack of a really scientific foundation for arithmetic.*

Richar DEDEKIND

*Unfortunately what is little recognized is that the most worthwhile scientific books are those in which the author clearly indicates what he does not know; for an author most hurts his readers by concealing difficulties.*

Evariste GALOIS

*Newton is, of course, the greatest of all Cambridge professors; he also happens to be the greatest disaster that every befell not merely Cambridge, but British mathematical science as a whole.*

Leonard ROTH

*It is true that a mathematician that is not also something of a poet will never be a perfect mathematician.*

Karl WEIERSTRASS

### 22° USAMO (1993) - 2

Sia  $ABCD$  un quadrilatero convesso tale che le diagonali  $AC$  e  $BD$  si intersechino ad angolo retto e sia  $E$  la loro intersezione. Provare che le riflessioni di  $E$  secondo  $AB, BC, CD, DA$  sono concicliche.

*"To speak algebraically, Mr. M is execrable, but Mr. G. is (x+1)ecrable"*

Edgar Allan POE

A conjecture both deep and profound  
Is wether the circle is round.  
In a paper of Erdős written in Kurdish  
A counterexample is found.

*Algebra is generous; she often gives more than is asked for.*

Jean d'ALEMBERT

*Mathematics is the only instructional material that can be presented in an entirely undogmatic way.*

Max DEHN

*A scientist can hardly meet with anything more undesirable than to have the foundations give way just as the work is finished. I was put in this position by a letter from Mr. Bertrand Russell when the work was nearly through the press.*

Gottlob FREGE

*The history of astronomy is the history of receding horizons.*

Edwin HUBBLE

*That sometimes clear and something vague stuff which is mathematics...*

Imre LAKATOS

*Being a language, mathematics may be used not only to inform but also, among other things, to seduce.*

Benoit MANDELBROT

*My work has always tried to unite the true with the beautiful and when I had to choose one or the other, I usually choose the beautiful.*

Hermann WEYL

*A professor is one who can speak on any subject. For precisely fifty minutes.*

Norbert WIENER

### 22° USAMO (1993) - 4

Siano  $a$  e  $b$  interi positivi dispari. Sia definita la sequenza  $(f_n)$  per cui  $f_1 = a$ ,  $f_2 = b$ , e per cui  $f_n$  e' il massimo divisore dispari di  $f_{n-1} + f_{n-2}$ . Mostrare che  $f_n$  e' una costante per valori sufficientemente grandi di  $n$  e determinarne il valore in funzione di  $a$  e  $b$ .

Cos'e' quella cosa che e' un gruppo abeliano per l'addizione, chiuso, distributivo e porta la corazza?

*L'anello dei Nibelunghi*

Come si chiama il cane del matematico?

*Cauchy (lascia dei "residui" a ogni palo)*

The Moebius strip is a pain  
When you cut it again and again  
But if you should wedge  
A large disk 'round the edge  
Then you just get a projective plane.

*Errors using inadequate data are much less than those using no data at all.*

Charles BABBAGE

*We have found a strange footprint on the shores of the unknown. We have devised profound theories, one after another, to account for its origins. At last, we have succeeded in reconstructing the creature that made the footprint. And lo! It is our own.*

Arthur EDDINGTON

*The shortest path between two truths in the real domain passes through the complex domain.*

Jaques HADAMARD

*An expert is someone who knows some of the worst mistakes that can be made in his subject, and how to avoid them.*

Werner HEISENBERG

*Abel has left mathematician enough to keep them busy for 500 years.*

Charles HERMITE

*Mathematics consists of proving the most obvious thing in the least obvious manner.*

George POLYA
